

EIDorado Donor[®]

Comprehensive blood management system

Integrated modular solutions

- Donor management
- Laboratory management
- Manufacturing
- Distribution

Key features and benefits:

Safety features

- Calculate donor eligibility
- Automate blood loss calculations
- Link comprehensive labeling and release rules to donor information, manufacturing and testing

Gain flexibility while meeting regulations

- Access SOPs and help messages
- Perform routine safety checks automatically
- Access donor unit profiles with one-click feature

Increase efficiency

- Streamline the pre-donation process
- Access information quickly, collect, track and store comprehensive donor and component information
- Use automated labeling and verification processes

Technical Platform:

- Windows[®] operating system or Oracle[®] RDBMS
- Centralized security
- Auto-update of upgrades
- Crystal Reports[®]
- Centralized administration

System highlights:

- Integrated modules¹ provide tailored solutions
- Automated safety checks help control product release
- At-A-Glance Bars allow easy access to critical data
- Multi-tabbed forms access all data with intuitive navigation at your fingertips
- Flexible component manufacturing processes increase efficiency in your lab
- Facility-specific SOP links can be tailored to your system
- ISBT 128 and ABC codabar automated blood labeling

1. Data on file at Haemonetics [MKO102387]

Module Highlights

System management

- **Auditor**
Track changes to data with secure time-stamped audit trails to independently record the date and time of operator entries and actions that create, modify or delete electronic records.
- **Security**
Determine security access with multi-level site defined hierarchy.
- **Table administration**
Enjoy simple access to all table administration forms and user configuration of site business rules.
- **Central upgrade management**
Automatically upgrade the application on all workstations from one central location.
- **Structure**
Query by multiple parameters within applications for quick access.
- **Search capabilities**
Look for components by prohibiting factor for increased search functionality.

Inventory / distribution

- **Complete activity record**
Track products and supplies more efficiently, as items are shipped or used in the system.
- **Central intake**
Receive an up-to-date inventory of available products at all sites, track products from the distribution location to customers or sites.
- **Configurable product options**
Uniquely identify, inventory products, and create ISBT 128 or ABC codabar labeling at the product level assuring advanced traceability and organized distribution of products.
- **Label selections**
Select print label/format prior to scanning to increase process efficiency.
- **Order item**
Features ABO/Rh columns for accessible data.

Manufacturing

- **Component manufacturing processes**
Increase efficiency in your lab, meet site specific operational needs, enable staff to capture detailed manufacturing information, and create and delete components automatically to streamline processes.
- **Label tasks**
Display the anticoagulant volume on label and reprint tabs.

Laboratory management

- **Configurable testing**
Streamline internal processes and save technician time using configurable testing which allows the system to automate test order generation based on intended use.
- **Site-defined reflex testing**
Help prevent the manufacture of units until additional tests are completed with site-defined reflex testing.
- **Automatic safety checks**
Performed throughout the system as part of the normal processing of donors, blood components and other blood products, to help prevent the release of unsuitable blood components.

Donor management

- **Configurable pre-donation information**
Gather information and record to consistently store data and help achieve accurate results.
- **Configurable donor identifier types**
Store donor photos, identify donors using multiple methods and use a duplicate search mechanism to help preserve the integrity of donor identification.
- **Special collections**
Automatically link donations from special collection requests to the patient and maintain that link throughout manufacturing, labeling and distribution.
- **Differentiating collection types**
Display color coded eligibility by collection type which may allow the user to navigate and access information easier.
- **Flexible record keeping**
Store multiple product weights/volumes and anticoagulant volumes for components.
- **Customize guidelines**
Ability to define eligibility rules for collection time and collection type.
